

Video 2.2

Creating a Repository Interface for the Image Domain Object

In this Video, we are going to take a look at...

- Creating a custom repository by declaring an interface
- Touring Spring Data's PagingAndSortingRepository
- Creating a custom finder method

Query Options

```
interface EmployeeRepository extends CrudRepository<Employee, Long>
{
    List<Employee> findByLastName(String f)
    List<Employee> findByFirstNameAndLastName(String f, String l)
    List<Employee> findByFirstNameAndManagerName(String f, String m)
    List<Employee> findTop10ByFirstName(...) // or findFirst10ByFirstName
    List<Employee> findDistinctEmployeesByFirstName(...)
    List<Employee> findByFirstNameAndLastNameAllIgnoreCase(...)
    List<Employee> findByFirstNameOrderByLastNameAsc(...)
    List<Employee> findByLastNameIsNull(...)
}
```

Advanced Query Options

```
interface CoolRepo extends CrudRepository<Employee, Long>
{
    Stream<Employee> findByLastname(String lastname)
    @Async Future<Employee> findByLastname(...)
    @Async CompletableFuture<Employee> findByLastname(...)
    @Async ListenableFuture<Employee> findByLastname(...)

    Page<Employee> findAll(Pageable p)
    Page<Employee> findByFirstName(String f, Pageable p)
    List<Employee> findAll(Sort s)
    Page<Employee> findByFirstName(String f, Pageable p, Sort s)
}
```

Summary

- We declared a repository with a Java interface
- We extended it with a custom finder, writing zero code
